[Asian Clam Data 2013.xls](#)

Gentlemen,

I look forward to working with you next week.

Attached are the basic SOPs (which include equipment needs) for each of our roles (you guys in one of your boats with sonde and disk for Water Quality), me and my interns in one of our boats with clamming equipment. I think the only big difference this year is that we agreed we don't need to collect samples for the EPA lab to run....the chemistry we get from the sonde should suffice. Also, I don't need to do the sediment grain size analysis again, assuming it's the same. Am I remembering that correctly?

So, be sure to check the Water Quality sheet for the stuff you need to bring. I'll do the same for my own.

Eric, I also attached the spreadsheet with the field data from last year. Check the November tab for the sites we hit.

Amy
